Door Factory 2025

Create User Components (continued)

- Edit the user component's "Family Types" and enter a description into the "Type Comments". These comments will show within the Door Factory.
- "Saveas" the new user component into the "User Component" directory and give it a new name starting with "User_".

Important Notes

- Do not add more family types, or change the family type name "User".
- Family name MUST begin with "User_".
- Do not change the families "Project Units".
- All material parameters created need to be INSTANCE based.
- Do not delete the copyright parameter, the Door Factory requires this to know that this is a Door Factory component.
- 3D view "Preview" is used by the Door Factory for the components icon, so please leave as-is.
- Remember to flex your family to ensure that your modelled elements are constrained properly.
- Please contact support@revitworks.com for help if required.

 Your new user component will now be selectable under the "User Component" tab, including the 3d preview icon and comment descriptor.
